BIOGRAPHY

Camila Rodrigues Victorino has been a patent specialist at Licks Attorneys' São Paulo office since 2024. Before joining Licks Attorneys, Ms. Victorino accumulated over 10 years of experience in the field of intellectual property, working with prominent law firms and IP companies. Her practice encompasses patent prosecution and IP technical consulting, including analyzing infringement, freedom-to-operate, patentability and validity, focusing on patent litigation and enforcement strategies. She also handles patent drafting and prosecution, from filing to grant, as well as third-party observations and post-grant oppositions, mainly in life sciences and pharmacy.

REPRESENTATIVE CASES

- Assisted a Brazilian chemistry company in developing a global strategy after a competitor began selling a similar product. The competitor's patent applications were located and analyzed for patentability and potential infringement of the client's product and process. A robust patent application was drafted to ensure non-infringement and patentability, resulting in several patent grants, including in key Asian markets;
- Secured the allowance of a Brazilian patent application that included identity percentages in its claims. This achievement was made possible by devising a strategic argument demonstrating why the claimed subject matter did not fall under the non-acceptance criteria outlined in the Brazilian Examination Guidelines for the clear and precise definition of biological matters;
- Represented a leading global cosmetic company in safeguarding their innovations developed in Brazil. Among the various cases handled, a notable example involved a single draft that required separation into three distinct applications covering different aspects by the deadline. She efficiently managed to deliver three robust patent applications within a limited timeframe, ensuring optimal protection for the client's commercial strategy;

- Represented one of the largest chemical companies globally, ensuring the optimal prosecution strategy within the unique context of the Brazilian IP system. This comprehensive approach included considerations for synergy, crystalline forms, and biological material.

EDUCATION

- Bachelor's Degree (B.Sc), Pharmacy and Biochemistry, University of São Paulo – USP (2015).
